Notes & Assumptions

Detailed pricing basis, scope, and validity

■ Pricing Validity — 15 Days Only

This estimate is valid for **15 calendar days** from the date of issue (**09 April 2026**). AWS On-Demand prices, instance availability, and currency exchange rates are subject to change without notice. A revised estimate must be requested if requirements change or the validity period lapses.

Pricing & Infrastructure Assumptions

AWS Pricing Basis	All prices are AWS On-Demand, Linux/UNIX, shared tenancy. No Reserved Instances or Savings Plans applied. Switching to 1-Year Reserved pricing typically reduces compute costs by 30-40%.
Region	Estimate uses region: us-east-1. Costs vary by region — a regional multiplier is applied to the base us-east-1 rate.
Inflation Rate	4% per annum applied to all compute and managed-service costs from Year 2 onwards, reflecting typical AWS price adjustments and currency exposure.
High Availability (AZ)	Production and DR environments are architected as Multi-AZ (High Availability). Pre-Prod/SIT/UAT are Single-AZ to optimize costs while maintaining functional parity.
Database Licensing	Postgres is Open-Source (No license cost). SQL Server and Oracle are priced on an AWS RDS 'License Included' basis. Enterprise/BYOL discounts are not applied.
Fallback Rates	If the live AWS Pricing API is unavailable, hardcoded March 2026 on-demand estimates are used. API-sourced prices are marked with a checkmark; estimated prices are noted as estimated.
Node Distribution	Infrastructure sizing computed by a rule-based algorithm, optionally enhanced by Groq LLM (llama-3.3-70b-versatile) at temperature=0. SHA-256 caching prevents redundant API calls.
Named & Concurrent Users	Concurrent users are fixed at 30% of Total Named Users for every forecast year. Year-over-Year growth is applied per the rates selected in the estimator tool.
Security & Compliance Costs	Fixed INR-converted estimates included: Airtel SOC \$500/mo, SOC Machines Rs.30,000/yr, Req 4 Antivirus Rs.2,600/yr, Req 6 Data Discovery Rs.4,000/yr. These are not subject to AWS price changes.
Pre-Prod / SIT / UAT	Environments sized at ~40% of Production infrastructure. PostgreSQL uses self-hosted EC2 (Patroni HA). SQL Server / Oracle use AWS RDS Managed. Costs are additive and not included in the Production PUPM.
Disaster Recovery (DR)	DR sized using a Pilot Light / Warm Standby model at ~50% of Production compute. Active-Active DR would approximately double the DR cost shown.
GCP Pricing	GCP prices are hardcoded us-central1 On-Demand Compute Engine estimates (March 2026). GCP Committed Use Discounts (1-Year CUD) typically reduce costs by ~37%.
PUPM Formula	$PUPM = \text{Discounted Annual Cost} / 12 / \text{Named Users}$ Discounted cost = Total AWS Cost x (1 - 11% discount). Total includes production, DR, Pre-Prod, buffer (5%), Business Support (3.91%), and one-time migration costs in Year 1.
Managed Services	Managed Services fees (30% of AWS annual total) cover platform monitoring, patching, incident management, and lifecycle support by the BusinessNext operations team.
