Notes & Assumptions

AWS Pricing	All prices are AWS On-Demand, us-east-1 region, Linux/UNIX, shared tenancy. Reserved or Savings Plans pricing will reduce costs by 30–40%.
Inflation Rate	4% per year applied to all compute costs from Year 2 onwards.
Fallback Rates	If live AWS Pricing API is unavailable, hardcoded March 2026 estimates are used.
Node Distribution	Distribution computed via rule-based algorithm enhanced by Groq LLM (llama-3.3-70b-versatile) at temperature=0. SHA-256 cache prevents redundant calls.
Security Costs	Airtel SOC (\$500/mo), SOC Machines (Rs 30,000/yr), Req 4 Antivirus (Rs 2,600/yr), Req 6 Data Discovery (Rs 4,000/yr) are fixed INR-converted estimates.
Pre-Prod / DR	Pricing derived from reference sizing workbook. PostgreSQL uses self-hosted EC2 (Patroni HA). SQL Server and Oracle use AWS RDS Managed.
Named Users	Year-over-year growth assumed at 5%. Concurrent users assumed at 30% of named users.
GCP Pricing	GCP prices are estimates using hardcoded us-central1 On-Demand rates (March 2026). GCP Cloud Billing API integration available via GOOGLE_CLOUD_PROJECT env var.
Confidentiality	This document contains confidential cost estimates. Do not distribute outside the project team without authorisation.
