Notes & Assumptions

Detailed pricing basis, scope, and validity

■ Pricing Validity — 15 Days Only

This estimate is valid for **15 calendar days** from the date of issue (**12 April 2026**). AWS On-Demand prices, instance availability, and currency exchange rates are subject to change without notice. A revised estimate must be requested if requirements change or the validity period lapses.

Pricing & Infrastructure Assumptions

AWS Pricing Basis	All prices are AWS On-Demand, Linux/UNIX, shared tenancy. No Reserved Instances or Savings Plans applied. Switching to 1-Year Reserved pricing typically reduces compute costs by 30-40%.
Region	Estimate uses region: us-east-1. Costs vary by region — a regional multiplier is applied to the base us-east-1 rate.
Inflation Rate	4% per annum applied to all compute and managed-service costs from Year 2 onwards, reflecting typical AWS price adjustments and currency exposure.
High Availability (AZ)	Production and DR environments are architected as Multi-AZ (High Availability). Pre-Prod/SIT/UAT are Single-AZ to optimize costs while maintaining functional parity.
Database Licensing	Postgres is Open-Source (No license cost). SQL Server and Oracle are priced on an AWS RDS 'License Included' basis. Enterprise/BYOL discounts are not applied.
Fallback Rates	If the live AWS Pricing API is unavailable, hardcoded March 2026 on-demand estimates are used. API-sourced prices are marked with a checkmark; estimated prices are noted as estimated.
Node Distribution	Infrastructure sizing computed by a rule-based algorithm, optionally enhanced by Groq LLM (llama-3.3-70b-versatile) at temperature=0. SHA-256 caching prevents redundant API calls.
Named & Concurrent Users	Concurrent users are fixed at 30% of Total Named Users for every forecast year. Year-over-Year growth is applied per the rates selected in the estimator tool.
Security & Compliance Costs	Fixed INR-converted estimates included: Airtel SOC \$500/mo, SOC Machines Rs.30,000/yr, Req 4 Antivirus Rs.2,600/yr, Req 6 Data Discovery Rs.4,000/yr. These are not subject to AWS price changes.
Pre-Prod / SIT / UAT	Environments sized at ~40% of Production infrastructure. PostgreSQL uses self-hosted EC2 (Patroni HA). SQL Server / Oracle use AWS RDS Managed. Costs are additive and not included in the Production PUPM.
Disaster Recovery (DR)	DR sized using a Pilot Light / Warm Standby model at ~50% of Production compute. Active-Active DR would approximately double the DR cost shown.
GCP Pricing	GCP prices are hardcoded us-central1 On-Demand Compute Engine estimates (March 2026). GCP Committed Use Discounts (1-Year CUD) typically reduce costs by ~37%.
PUPM Formula	$PUPM = \text{Discounted Annual Cost} / 12 / \text{Named Users}$ Discounted cost = Total AWS Cost x (1 - 11% discount). Total includes production, DR, Pre-Prod, buffer (5%), Business Support (3.91%), and one-time migration costs in Year 1.
Managed Services	Managed Services fees (30% of AWS annual total) cover platform monitoring, patching, incident management, and lifecycle support by the BusinessNext operations team.

Scope of This Estimate

Included	Production cloud infrastructure (compute, database, storage, networking)
Included	Pre-Production / SIT / UAT environments (if selected)
Included	Disaster Recovery environment (if selected)
Included	BusinessNext platform licensing and managed services
Included	One-time migration, performance testing, and managed-service setup (Year 1)
Excluded	Application development or customisation effort
Excluded	End-user device provisioning or on-site hardware
Excluded	Third-party SaaS subscriptions (e.g. Salesforce, Twilio, Okta)
Excluded	Data centre co-location or physical network charges
Excluded	Regulatory compliance certification fees
